18. Marriages, Divorces and Annulments by County of Occurrence..... 86
19. Divorces and Annulments by Legal Grounds for Decree and by Plaintiff..... 86
20. Divorces and Annulments by Number of Children Reported Under 18 Years of Age..... 87
21. Divorces and Annulments by Duration of Marriage in Years..... 87
22. Selected Characteristics of Resident Marriages..... 88-98

# INTRODUCTION

This report contains a summary of the vital statistics for the State of Maine for the calendar year 1981. The Department of Human Services has the dual responsibility of maintaining an effective system of vital registration and of making vital statistics available to the public. Within the Department itself, these data are needed for planning, managing, and evaluating programs that will improve the health of Maine people. The data are widely used, as well, for estimating and projecting population characteristics and changes.

Selected summary tables are presented in this report. Supporting data as well as special tabulations are available for further analysis. Requests should be directed to:

Division of Data and Research

State House, Station #11
Augusta, Maine 04333

## VITAL STATISTICS TABLES AVAILABLE ON REQUEST

| Table # | Description |
|---|---|
| | **BIRTHS** |
| 1 | Resident Live Births by Age of Mother, Sex of Child & Live Birth Order |
| 2 | Resident Illegitimate Live Births by Age of Mother, Sex of Child & Birth Order |
| 3 | Resident Live Births by Age of Mother & Birth Weight in Grams |
| 4 | Resident Plural Births by Age of Mother & Birth Weight in Grams |
| 5 | Resident Illegitimate Births by Age of Mother & Birth Weight |
| 6 | Non-resident Births, County of Occurrence by State of Residence |
| 7 | Resident Births Occurring Out of State, County of Residence by State of Birth |
| 8 | Resident Live Births by County, Town and Month |
| 9 | Live Births Occurring in Maine, Selected Characteristics by Place of Birth |
| 10 | * Resident Live Births by Selected Characteristics |
| 12 | Live Births Occurring in Maine by Age of Mother, Sex of Child & Legitimacy |
| 13 | White Live Births Occurring in Maine by Age of Mother, Sex of Child and Birth Order |
| 14 | Non-White Live Births Occurring in Maine by Age of Mother, Sex of Child and Birth Order |
| | **DEATHS** |
| 1 | * Resident Deaths from 282 Selected Causes by Age and Sex |
| 2 | Non-Resident Deaths, County of Occurrence by State of Residence |
| 3 | Resident Deaths from 72 Selected Causes by Age, Race & Sex |
| 4 | Resident Deaths Occurring Out of State County of Residence by State of Birth |
| 5 | Deaths from 72 Selected Causes by County and Town of Residence |
| 6 | Deaths Occurring in Maine - Primary and Secondary Causes of Cancer, Alcohol and Drugs |
| 10 | Resident Deaths by County, Town and Month |
| 11 | Resident Deaths by County, Town and Age |
| 12 | Deaths from 72 Selected Causes by County and Hospital of Occurrence |
| 13 | Deaths Occurring in Maine, by Sex, Race, County and Town |
| 14 | Deaths Occurring in Maine by Age, Sex and Race |
| 15 | * Resident Infant Deaths from 65 Selected Causes by Age and Sex |
| 16 | * Deaths from Accidents Occurring in Maine, County of Occurrence by Place of Accident |
| 17 | Accidental Deaths Occurring in Maine, County of Occurrence by State of Residence |
| 18 | Resident Infant Deaths by Age, Sex, County and Town |

* Tables published in this report.

## VITAL STATISTICS TABLES AVAILABLE ON REQUEST

| Table # | Description |
|---|---|
| | **DIVORCES** |
| 30 | * Divorces and Annulments by Legal Grounds for Decree and by Plaintiff |
| 31 | * Divorces and Annulments by Number of Children Reported Under 18 Years of Age |
| 32 | * Divorces and Annulments by Duration of Marriage in Years |
| 33 | Divorces and Annulments by County by Month |
| | **MARRIAGES** |
| 40 | Marriages by Age and by Previous Marital Status of Bride and Groom |
| 41 | Marriages by Previous Marital Status of Bride and Groom |
| 42 | Marriages by County by Month |
| 43 | * Selected Characteristics of Resident Marriages |
| | **ABORTIONS** |
| 1 | Induced Abortions by Residence, Selected Characteristics |
| 2 | Induced Abortions by Gestation Weeks, by Race |
| 3 | Induced Abortions by Gestation Age, Type of Procedure |
| 4 | Induced Abortions by Age and Race |
| 5 | Induced Abortions by Marital Status and Race |
| 6 | Induced Abortions by Number of Previous Live Births |
| 7 | Induced Abortions by Number of Previous Induced Abortions |
| 8 | Induced Abortions by State of Residence |
| 9 | Induced Abortions by Weeks of Gestation |
| 10 | Spontaneous Abortions by Gestation Weeks |
| | **FETAL DEATHS** |
| 1 | Selected Characteristics of Fetal Deaths by County/Town |

* Tables published in this report.

# TECHNICAL NOTES

## Geographic Allocation

In addition to recording vital events occurring in Maine, the Office of Vital Records receives transcripts of birth certificates for children born outside Maine to a mother who is a resident of Maine. Death certificates for persons who are residents but die outside the boundaries of Maine are also included. Transcripts of non-resident births and deaths are exchanged with all other states and with Canada.

The statistics on births in this report refer to residents of Maine only, regardless of whether or not the birth actually occurred in Maine. With the exceptions of Tables 11 and 12, death statistics also refer to residents of Maine only. Except for Table 22, statistics on marriages include non-residents as well as residents of Maine who marry in the State. All statistics on divorces include non-residents as well as residents who are divorced in Maine.

Births are allocated to the usual residence of the mother and deaths to the usual residence of the deceased. This information is obtained for the certificate by the physician, hospital record librarian, funeral director, or other person responsible for completing the certificate of birth or death. The practice of allocating births and deaths to usual place of residence was initiated in 1935.

All occurrence data for marriages and divorces are distributed to the place in Maine where the marriage ceremony was performed or where the divorce decree was granted, rather than the place of residence.

## Factors Affecting Accuracy

Several factors may produce certain slight inaccuracies in this report. Some of the more important of these factors are outlined below:

Completeness of Registration: A birth certificate test conducted in 1950 indicated that about one percent of births in Maine were not recorded. It is assumed that registration has continued to be at least this complete.

Although no test of death registration has ever been done, it is assumed that death registration is reasonably complete since burial permit laws and regulations require the filing of a death certificate before a burial permit for the disposition of the body is issued.

Reporting of all terminations of pregnancy, whether spontaneous or induced, has been required in Maine for many years. Analysis of fetal death rates over time, however, indicates that there has been considerable variation in the completeness of registration. A specific reporting form for abortions (spontaneous and induced) was introduced in 1978. Comparison with independent data sources suggests that induced abortions may be underreported by 10 to 15%.

In addition to unrecorded vital events, other vital events may not be included in this report for several reasons: failure of the person required to report the event to make a timely report; failure of a municipal clerk to make a timely report to the State Registrar; or failure of other states to make timely exchanges of nonresident transcripts of births and deaths.

Errors in Data: Data in this report are based upon original certificates of births and deaths, copies of original certificates of marriages prepared by city and town clerks, and abstracts of decrees of divorces prepared by the clerks of courts. Errors in data may be introduced by persons giving information for the original certificate, persons involved in the actual preparation of the original certificate, or persons involved in the preparation of the copies or abstracts of the original certificates.

## Small Frequencies

The numbers of births or deaths reported for a community represent complete counts of these events. As such, they are not subject to sampling error or variation, although they are subject to errors in the collection and processing procedures. However, the number of events that actually occurred may be considered as one of a large series of possible results that could have arisen under the same general circumstances. The probable range of values may be estimated from the actual figures according to certain statistical assumptions (Vital Statistics for the U.S., Vol.1, 1959, p.1-20). When the figures are used for comparison of frequencies and rates over a time period or for different areas, appropriate statistical methods should be used to assess the significance of the comparisons.

Frequencies of and rates based on fewer than 10 deaths should be used carefully because they are subject to large random fluctuations. The number "10" is arbitrary, however, and is not set forth as a critical point distinguishing statistically reliable rates.

## Mortality Classification

The mortality classification used in this report is the Ninth Revision of the International Classification of Diseases. It consists of a list of 722 categories of diseases and morbid conditions, 192 categories for classification of the external cause of an injury, and 190 categories for the characterization of injuries according to the nature of the lesion.

The International Classification of Diseases is revised approximately every ten years to incorporate advances in medical science and to reflect changing medical opinion and practice. The Sixth Revision was used from 1949-1957, the Seventh Revision from 1958-1967, the Eighth Revision from 1968-1978, and the Ninth Revision after 1978.

Under the Ninth Revision, the method for selecting the cause of death for statistical purposes remains the same as the method under the Sixth Revision. The Sixth Revision instituted a method whereby the physician in attendance at death indicates the disease or morbid condition which he considers to be the underlying cause of death. The underlying cause is defined as "(a) the disease or injury which initiated the train of events leading directly to death, or (b) the circumstances of the accident which produced fatal injury." Prior to 1981, when two or more causes were jointly recorded, a nosologist in the Office of Vital Records selected and coded the underlying cause using the ancillary information provided on the death certificate by the physician. Beginning in 1981, however, all causes mentioned on the certificate are coded. The underlying cause is determined by using the Automated Classification of Medical Entities (ACME) system. Information on the associated causes is retained on the computer records for use in studying health problems.

Two groupings by cause of death are utilized in this report. Deaths by selected age groups are tabulated using a list of 282 cause groups and deaths by residence are tabulated using 72 cause groups.

The classification of place of accident (home, farm, street or highway, etc.) by the ACME system differs somewhat from the classification used previously. Thus, comparisons with earlier data must be made cautiously.

## Definitions

| | |
|---|---|
| Residence | Usual place of residence of person to whom event occurred. For births and fetal deaths, residence is defined as the mother's place of residence. |
| Occurrence | Place where the event occurred. |
| Minor Civil Division | In Maine, Minor Civil Divisions are the local or city/town level of civil government. |
| Race | Race for mother, father, or decedent is as stated on certificate. Race of child is determined from the race of the parents. |
| Live Birth | A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. |
| Fetal Death | Death prior to the complete expulsion or extraction from its mother of a product of conception; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Fetal deaths of at least 20 weeks of gestation must be reported on the "Fetal Death Report". Fetal deaths of less than 20 weeks gestation are reported on the "Report of Abortion (Spontaneous and Induced)." |
| Spontaneous Abortion | A termination of pregnancy, at less than 20 weeks gestation, through natural causes and without the aid of mechanical or medicinal agents. All spontaneous abortions are reported on the "Report of Abortion (Spontaneous and Induced)." |
| Induced Abortion | Induced abortion means the intentional interruption of a pregnancy by the application of external agents, whether chemical or physical, or the ingestion of chemical agents with an intention other than to produce a live birth or to remove a dead fetus. All induced abortions are reported on the "Report of Abortion (Spontaneous and Induced)." |
| Infant Death | Death occurring to a live born individual less than 1 year of age. |
| Neonatal Death | Death occurring to a live born individual before completing 27 days of life. |
| Out-of-Wedlock Birth | Mother not married at time of delivery. Includes women who were widowed, divorced, or never married. |
| Birthweight | Weight of fetus or infant at time of delivery (normally recorded in grams). |

Definitions (continued)

| | |
|---|---|
| Maternal Deaths | Those wherein the physician has designated a maternal condition as the underlying cause of death. |
| Underlying Cause of Death | That condition giving rise to the chain of morbid events leading to death, or the circumstances of the accident or violence that produced the fatal injury. |
| Associated Cause of Death | Condition other than the underlying cause of death which may have contributed to the death. |
| Multiple Cause of Death | Any cause of death mentioned on the death certificate, whether underlying or associated. |

Rates

| | | | |
|---|---|---|---|
| Birth Rate | = Resident Live Births / Total Resident Population | x | 1,000 |
| Death Rate | = Resident Deaths / Total Resident Population | x | 1,000 |
| Fetal Death Rate | = Resident Fetal Deaths / Total Resident Live Births and Resident Fetal Deaths | x | 1,000 |
| Infant Death Rate | = Resident Infant Deaths / Total Resident Live Births | x | 1,000 |
| Neonatal Death Rate | = Resident Neonatal Deaths / Total Resident Live Births | x | 1,000 |
| Maternal Death Rate | = Resident Maternal Deaths / Total Resident Live Births | x | 10,000 |
| Age-Specific Death Rate | = Resident Deaths in Specific Age Group / Total Resident Population in Specific Age Group | x | 100,000 |
| Cause-Specific Death Rate | = Resident Deaths from Specific Cause / Total Resident Population | x | 100,000 |
| Sex-Specific Death Rate | = Resident Deaths of Indicated Sex / Total Resident Population of Indicated Sex | x | 100,000 |
| Marriage Rate | = Marriages Performed / Total Resident Population | x | 1,000 |
| Divorce Rate | = Divorces / Total Resident Population | x | 1,000 |
| Population Denominators | = Mid-calendar year estimates | | |
| Event Denominators | = Registered totals for the calendar year | | |

# POPULATION
# AND
# HISTORICAL DATA

## POPULATION

The estimated population of Maine on July 1, 1981 was 1,132,849. This is a net gain in population of 7,822 or 0.7 percent more than the number of inhabitants enumerated in the 1980 U.S. Census. The net migration between April 1, 1980 and July 1, 1981 was 288, which is a mean annual rate of 0.2 per 1,000 population. The natural increase, which is tne difference between total births and total deaths, was 7,534.

All counties except Washington, Aroostook, Sagadahoc and Oxford increased in population between April 1, 1980 and July 1, 1981. The largest increase in county population was 3,137 in York County. The largest decrease was a reduction of 630 people in Washington County. Seven counties had a net migration outward. The largest net migration outward was 1,235 in Aroostook County. The largest net migration inward was 2,184 in York County.

The age distribution shows that 145,330 or 12.8 percent of the population, are 65 or older. This is an increase of 4,369 over the 65+ population in 1980. The school-age population, aged 5-17, was 235,694 or 7,225 fewer than in 1980. The pre-school population, ages under 5, was 80,560 or 2,029 more than in 1980. The population aged 18-44 increased 9,616 over 1980 while the population aged 45-64 decreased by 967.

TABLE 1 POPULATION ESTIMATES OF MAINE COUNTIES BY AGE GROUP

| County | April 1 1980 Census | Natural Increase | Net Migration | Total | Estimated Population by Age Group on 7/1/81 | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | | 0-4 | 5-17 | 18-44 | 45-64 | 65+ |
| Androscoggin | 99,657 | 715 | -329 | 100,043 | 7,336 | 20,918 | 39,144 | 19,386 | 13,259 |

# NATALITY

## LIVE BIRTHS

There were 16,567 resident live births registered in Maine in 1981. The number of live births increased 0.6 percent from 1980, but the birth rate remained the same at 14.6 per 1,000 population.

### Sex

The number of male live births was 8,409 and the number of female live births was 8,158. The sex ratio of live births was 103.1 male live births for every 100.0 female live births.

### Plural Births

In 1981, there were 295 children born alive in plural births.

### Race

Only 1.7 percent of all resident live births in 1981 were nonwhite. The total number of nonwhite births in 1981 was 286. This is an increase of 14.4 percent over the number of resident nonwhite live births in 1980.

The largest nonwhite group was American Indian, who gave birth to 84 live born children. Blacks gave birth to 83, and persons of other nonwhite races gave birth to 119 live born children.

### Marital Status

There were 2,369 out-of-wedlock births to mothers who were Maine residents in 1981. Out-of-wedlock live births represented 14.3 percent of all resident live births. With the exception of 1971, the percent of births that are out-of-wedlock has increased in every year since 1960.

### Hospital Births

The number of resident live births in hospitals or doctor's offices in 1981 was 16,400 or 99.0 percent of all resident live births.

## TERMINATIONS OF PREGNANCY

### All Terminations

A total of 3,832 terminations of pregnancy occurring in Maine were reported in 1981. Ninety-eight fetal deaths of 20 or more weeks gestation were reported. There were 3,734 terminations reported on abortion records, of which 454 were spontaneous abortions. Total terminations of pregnancy occurring in Maine decreased 17.9 percent from 1980; fetal deaths decreased by 26.9 percent; spontaneous abortions, by 10.8 percent; and induced abortions, by 18.5 percent.

Table 3

TERMINATIONS OF PREGNANCY BY TYPE AND GESTATION
Maine, 1981

| Gestational Age | Total | Fetal Deaths | Abortions | |
|---|---|---|---|---|
| | | | Spontaneous | Induced |
| Under 9 weeks | 1,939 | - | 194 | 1,745 |
| 9-12 weeks | 1,609 | - | 173 | 1,436 |
| 13-19 weeks | 128 | 4 | 54 | 70 |
| 20-27 weeks | 44 | 40 | 3 | 1 |
| 28 weeks | 52 | 52 | - | - |
| Unknown | 60 | 2 | 30 | 28 |
| TOTAL | 3,832 | 98 | 454 | 3,280 |

### Induced Abortions

Of the 3,280 induced abortions occurring in Maine, 2,881 were to legal residents of Maine; 399 were to nonresidents. Of the 399 nonresident abortions, 352 were to Canadians. The resident induced abortion rate was 173.9 per thousand live births.

Characteristics of induced abortions by county of residence are shown on Table 6. The highest induced abortion rate (323.1) was in Penobscot County. Other counties with significantly high rates were Hancock (284.6), Franklin (249.4), Waldo (219.2) and Cumberland (194.4). The lowest induced abortion rate (51.6) was in York County. Other counties with significantly low rates were Oxford (93.8), Aroostook (110.4) and Androscoggin (110.7). It should be observed that, of the overall decrease between 1980 and 1981 of 713 induced abortions to Maine residents, nearly a third (176) were to residents of York County.

TABLE 4

# MORTALITY AND MORBIDITY

## MORTALITY

There were 10,331 deaths of Maine residents in 1981. The crude mortality rate was 9.1 per 1,000 population, a decrease of 5.2 percent from 1980.

### Sex

In 1981 the number of resident male deaths was 5,516 and the number of resident female deaths was 4,815. The death rate among males was 10.0 per 1,000 male population and among females was 8.3 per 1,000 female population.

### Leading Causes of Death

In Table 8, "Life Lost" is based on expectation of life from a 1978 United States life table for white population. The death of an infant represents a total of 74.0 years of life lost. The death of a 50 year old person represents 27.8 years of life lost and the death of a 90 year old person represents 3.1 years of life lost.

When one examines the leading causes of death in terms of "Life Lost" rather than total deaths, an entirely different picture is presented. "Certain Conditions Originating in Perinatal Period", which caused only 0.6 percent of total deaths, caused 3.2 percent of total life lost in 1980, and jumped from 14th place in total deaths to 6th place in total life lost. "Congenital Anomalies" which was in 13th place in total deaths, was in 8th place in total life lost. Death from "Suicide" was in 9th place in total deaths but in 5th place in total life lost. The most prominent shift in the other direction was "Atherosclerosis" which was in 7th place in total deaths and in 12th place in total life lost.

The "Life Lost" rates for "Nephritis, Nephrotic Syndrome and Nephrosis," "Congenital Anomalies","Suicide", and "Aortic Aneurysm" increased over 1980 by 50.0 percent, 26.1 percent, 19.4 percent and 14.3 percent respectively.

The largest decreases in "Life Lost" rates were "Cerebrovascular Disease", which decreased by 14.0 percent from 1980, followed by "Atherosclerosis", and "Accidents and Adverse Effects", which decreased 11.1 percent and 10.1 percent respectively.

Multiple Causes: Most major causes of death are contributing factors in many deaths in which they are not the underlying cause of death. For example, in 1981 in Maine, diabetes mellitus was the underlying cause of 135 deaths but was a contributing factor in an additional 599 deaths. The relative frequencies with which specific causes are mentioned on the death record as underlying or multiple (any mention) causes are displayed in Table 10.

The ratio of multiple cause to underlying cause is particularly high for such cause categories as septicemia (6.42), diabetes mellitus (5.44), nutritional deficiencies (15.83), anemias (9.35), hypertension with or without renal disease (10.72), all other forms of heart disease (6.30), renal failure and kidney disorder (6.76), and symptoms and ill-defined conditions (39.60).

In several other disease categories, the ratios are lower but still substantial. These include atherosclerosis (4.90), pneumonia (3.41), and chronic obstructive pulmonary disease (2.84).

Accidents: Accidents occurring in Maine in 1981 accounted for 453 deaths. Of the 321 accidents for which the place of accident was known, 67.9 percent happened on Maine's streets and highways and 15.0 percent happened at home. In 7.1 percent of the accidents, the victim was working at the time the accident occurred.

The state death rate for accidents occurring in Maine was 40.0 deaths per 100,000 population. Washington County had a substantially higher rate in 1981 than the state as a whole.

The figures given in Table 11 are not directly comparable with accident figures for previous years due to a difference in coding procedures for place of accident. The figures for 1981 are obtained directly through the ACME coding process.

Infant Deaths

There were 176 infant deaths in Maine during 1981 and the infant mortality rate was 10.6 per 1,000 live births. This was a 14.3 percent increase in number from 1980 and 14.0 percent increase in rate. The infant mortality rate has decreased 49.3 percent since 1970, 57.9 percent since 1960, 66.0 percent since 1950, and 80.0 percent since 1940.

There were 110 neonatal deaths (infant deaths during the first four weeks of life) in 1981 and the neonatal mortality rate was 6.6 per 1,000 live births. This was an increase in number of 13.4 percent since 1980.

Perinatal Mortality

The estimated perinatal mortality rate in 1981 was 12.2 perinatal deaths per 1,000 live births and fetal deaths of twenty weeks or more gestation.

The perinatal mortality rate is based on the following formula:

$$\frac{\text{Fetal death 20 weeks or more + Neonatal deaths}}{\text{Total live births + Fetal deaths 20 weeks or more}} \times 1{,}000$$

The 1981 perinatal mortality rate is based on 94 fetal deaths of 20 or more weeks gestation and 110 neonatal deaths.

Maternal Mortality

There were no maternal deaths in 1981.

# MARRIAGES AND DIVORCES

## MARRIAGES

There were 12,290 marriages occurring in Maine in 1981. Of this number, 11,290 or 91.9 percent were marriages in which the bride and/or groom were residents of Maine. The occurrence marriage rate was 10.8 per 1,000 population.

There were 11,290 resident brides in 1981, of which 72.2 percent were natives of Maine. There were 10,891 resident grooms of which 70.2 percent were natives of Maine. About 22.9 percent of the resident brides, and 9.1 percent of the resident grooms were under 20 years of age. About 65.6 percent of the resident brides were married for the first time and 63.3 percent of the resident grooms were married for the first time.

Civil ceremonies were performed in 39.2 percent of the resident marriages in 1981. There were 163 resident mixed marriages in 1981, an increase of 7.9 percent from last year.

## DIVORCES AND ANNULMENTS

There were 6,351 divorces granted in Maine during the calendar year 1981. This was 162 more than the number of divorces granted in 1980. The crude divorce rate was 5.6 per 1,000 population. There were 13 marriages annulled in 1981.

### Plaintiff

The wife was the plaintiff in 68.0 percent of the divorces, and the husband in 31.9 percent.

### Legal Grounds for Decree

Cruelty was the legal grounds for decree in 5.7 percent of all divorces granted in Maine in 1981. Cruelty includes "cruel and abusive treatment" and "extreme cruelty". "Differences" was legal grounds for decree in 94.0 percent of the divorces.

### Duration of Marriage

The median duration of marriage before divorce in 1981 was 6.5 years. The second year of marriage was the peak year during which marriages were ended by divorce.

### Minor Children

The divorced couple had one or more minor children in 3,734 or 58.8 percent of 1981 divorces. Ten divorced couples had 6 or more minor children.
